

This cart is designed to handle anything the drywall industry can throw at it. It is fully capable of carrying steel studs or sections of drywall. The inside brackets are designed for steel studs. Stack the studs inside the legs and cut the bands. The studs stay in place and do not scatter over the floor. Keep the work area clean and clutter free. The outside legs are removable for easy unloading and reloading of steel studs or drywall sections.

The cart comes standard with fork lift mounts to allow for easy storage and movement around the warehouse. These unique carts can be stacked up on top of one another, up to three units high! This provides maximum efficiency for warehouse storing.

As with all American Carts, this cart is made in the USA by local workers. The steel is top grade and the construction is done with care. The final powder coating is done with a world class powder coating machine for optimal quality and finish.

SPECIFICATIONS

Outside bracket to outside bracket width: 31"

Inside bracket to Inside bracket width: 26"

Length: 60" L

Capacity: 3000 lbs

Weight: 188 lbs
